

Part No. ALL18626

High Vibration Motor Mount Spacer Kit (Big Bar Soft Spring Cars)

Ever wonder what happens to many race car components when the chassis is continually bottomed out? Spacers are made from a unique material that will not let the engine vibrate under normal conditions yet they "give" a little during bottoming out, easing life a bit on engine and driveline components. 1/4" thick spacers are 1-1/2" O.D. and have a 1/2" hole. Package of 2.
