

PROPER HELMET FIT IS VITAL TO THE PERFORMANCE OF A HELMET DURING AN IMPACT. FOR THE HELMET TO PERFORM PROPERLY DURING AN IMPACT, IT MUST STAY SECURELY ON THE HEAD.

Measuring the head is only a starting point for the entire sizing procedure. Due to varying shapes, heads that are apparently the same size when measured by a tape may not necessarily fit the same size helmet.

A small metal tape measure or a cloth tape may be used to make your initial measurement. You can also use a string, which can then be laid against a measuring tape.

Measure the circumference of the head at a point approximately one inch above the eyebrows in front, and at a point in the back of the head that results in the largest possible measurement. Take several measurements. The largest measurement is the one you want to use.
