

How to Measure Guide

For Hybrid Pro and R3 Series Head Restraints

1. When measuring to determine size, place fabric or soft measuring tape around chest just below pectoral muscles. (see diagram)
2. Driver should measure chest with driving suit on. If not able to measure with suit on, add approx. 1" to measurement.
3. Measurement should be taken with the tape placed against the driver with out any slack or with out pulling the tape tight.
4. Once measurement has been determined refer to the size charts for device size selection.
5. Please contact your local dealer or Safety Solutions for aide in selecting your appropriate size if you unsure of what size to select.
